Nature of Activity : प्रशिक्षण कार्यशाळा

Day & Date : मंगळवार, २६ ऑक्टोबर २०२१

Objective : १. मराठी विकिपीडिया व त्यातील बंधु-प्रकल्प यांची ओळख करून देणे.
२. मराठी भाषेसाठी आपणहून योगदान देण्यासाठी विद्यार्थ्यांना प्रोत्साहित करणे.

No. of Participants: २५

Details of the Activity :

प्रथम वर्ष वाणिज्यमध्ये 'मराठी' विषय शिकत असणाऱ्या विद्यार्थ्यांसाठी भाषा मंडळातर्फे 'मराठी विकिपीडिया, विकिक्वोट व विकशनरी' संबंधित एक उपक्रम राबविण्यात आला आहे. उपक्रमाचे प्राथमिक उद्दिष्ट विद्यार्थ्यांना मराठी विकिपीडिया व त्यातील बंधु-प्रकल्प यांची ओळख करून देऊन त्यात सक्रिय सहभाग घेण्याची संधी प्राप्त करून देणे असे आहे. उपक्रमात सक्रिय होण्यासाठी आवश्यक असलेल्या प्रशिक्षणासाठी २५ विद्यार्थी 'गुगल मिट'वर ऑनलाईन पद्धतीने एकत्र जमले होते.

सर्वप्रथम विषय-शिक्षिका व भाषा मंडळाच्या विभाग-प्रमुख डॉ. केतकी मोडक यांनी भाषा मंडळाच्या या प्रथम कार्यक्रमाच्या निमित्ताने सर्वांचे स्वागत केले व उपक्रमाची प्रस्तावना केली. 'मराठी विकिपीडिया'ची ओळख व उजळणी, तसेच उपक्रमाचे उद्दिष्ट त्यांनी विद्यार्थ्यांपुढे मांडले.

त्यानंतर मराठी विकिपीडिया व त्याचे काही बंधुप्रकल्प याविषयी विद्यार्थ्यांना माहिती देण्यात आली. महाविद्यालयाच्या आधीच्या काही वर्षांत याबाबत झालेल्या उपक्रमांची माहिती, विकिस्रोतवर २ वर्षांपूर्वी महाविद्यालयाच्या विद्यार्थ्यांनी केलेले पुनर्मुद्रणाचे भरीव काम, साहित्यसंग्रहाच्या दृष्टीने 'मराठी विकिस्रोत'चे योगदान इत्यादीबाबत यावेळी चर्चा झाली. विकिपीडियावर कोणतेही काम सुरु करताना आवश्यक असलेल्या काही गोष्टींचे प्रशिक्षणही विद्यार्थ्यांना यावेळी देण्यात आले. त्यामध्ये आपले सदस्यनाम तयार करून विकिपीडियावर आपले खाते निर्माण करणे, आपले स्वतःचे सदस्यपान तेथे तयार करणे अशा गोष्टींचा समावेश होता. महाविद्यालयाच्या वाणिज्य विभागाच्या शिक्षिका कु. ऐश्वर्या कुलकर्णी यांनी याबाबत विद्यार्थ्यांना मार्गदर्शन केले.

त्यानंतर डॉ. केतकी मोडक यांनी विद्यार्थ्यांना मराठी 'विकिक्वोट' व 'विकशनरी' या विकिपीडियाच्या दोन बंधुप्रकल्पांबाबत सविस्तर माहिती दिली. वेगवेगळे वाक्प्रचार, म्हणी, अनेक थोर प्रभृतींची काही वेचक विधाने इत्यादी मजकूर 'विकिक्वोट' वर उपलब्ध असल्याचे त्यांनी स्क्रीन शेअर करून विद्यार्थ्यांना दाखवले. त्यात आपण सर्वांनी योग्य माहितीची भर घालण्यासाठी प्रयत्न करावा असे आवाहन डॉ. मोडक यांनी उपस्थितांना केले. ही माहिती अनेक पुस्तके, घरातील वडीलधाऱ्या व्यक्ती यांची मदत घेऊन गोळा केली जाऊ शकते, व ती 'विकिक्वोट'वर आपले खाते उघडून लिहिली जाऊ शकते असेही त्यांनी नमूद केले. आपण दिलेल्या या योगदानाचा उपयोग स्पर्धा परीक्षांची तयारी करत असलेल्या विद्यार्थ्यांना नक्कीच होईल असेही मत त्यांनी यावेळी व्यक्त केले.

त्यानंतर 'विक्षनरी' या शब्दकोशात देखील अनेक प्रकारे शब्दांचे अर्थ, त्यांची व्युत्पत्ती, त्याचे वाक्यातील उपयोग अशी बरीच माहिती उपलब्ध असल्याचे विद्यार्थ्यांना दाखविण्यात आले. यात भर घालू इच्छित असणाऱ्या विद्यार्थ्यांना महाविद्यालयाकडे स्कॅन कॉपीत उपलब्ध असलेल्या कै. विद्याधर वामन भिडे रचित 'सरस्वती कोशा'ची काही पाने उपलब्ध करून देण्याचे ठरविण्यात आले.

संपूर्ण प्रशिक्षणात विद्यार्थी अत्यंत उत्साहाने सहभागी झाले असून सर्वांनी हे काम करण्याची व भाषेसाठी योगदान देण्याची तयारी असल्याचे आवर्जून नमूद केले. प्रशिक्षण संपल्यानंतर नव्याने समजलेल्या सर्व गोष्टींवर विद्यार्थ्यांनी खुली चर्चा केली. लवकरच याबाबत सक्रीय होण्यास उत्सुक असल्याचे देखील विद्यार्थ्यांनी यावेळी सांगितले.

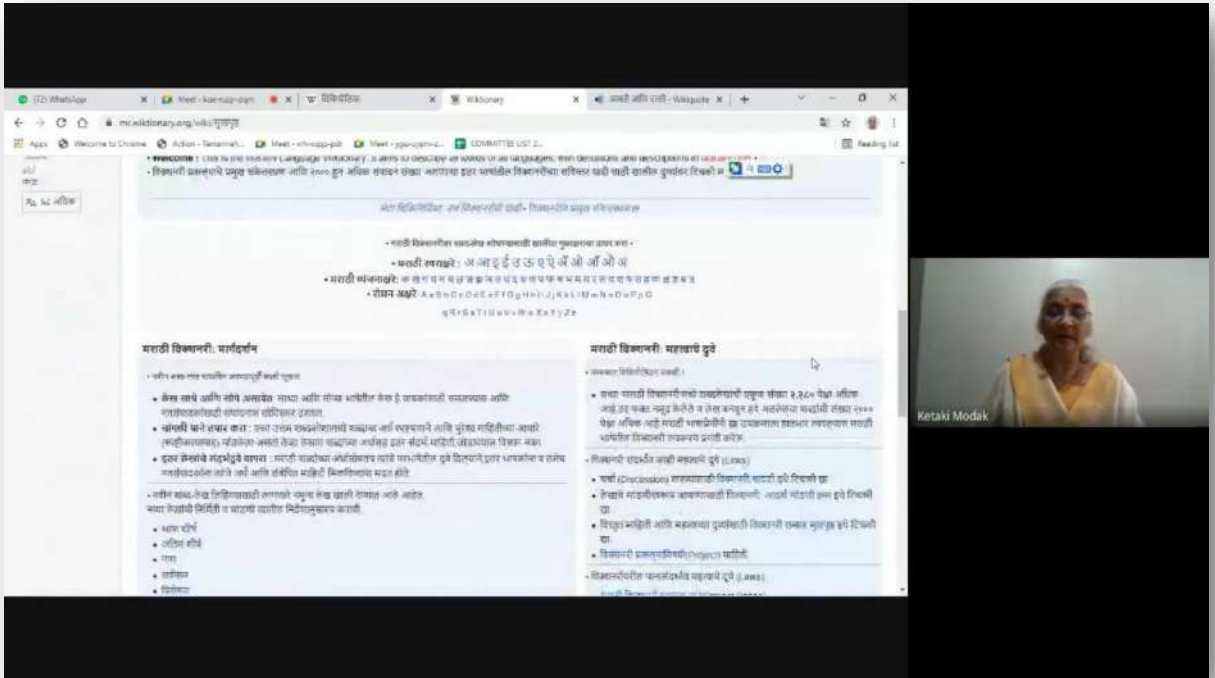

लवकरच उपक्रम सुरु होणार असल्याच्या, व हातून काही चांगले काम होणार असल्याच्या आनंदात प्रशिक्षणाची सांगता झाली.

आपण "भारतीय स्वातंत्र्य चळवळीतील लेखणीचे योगदान" या विषयावर आभासी पद्धतीने प्रेरक व्याख्यान दिले. विद्यार्थ्यांना अधिक तपशीलपूर्ण माहिती मिळाली. तसेच आपण आपल्या शुभहस्ते 'निनाद' या भित्तीपत्रकाचे प्रकाशन केलेत आणि आमच्या विद्यार्थ्यांना प्रोत्साहन दिलेत, या बद्दल आपले आभार!

Dear Sir,

The govt. of India has desired that a large scale virtual Surya Namaskar programme may be organized to mark the holy occasion of Makar Sankranti on 14th January, 2022 under Azadi Ka Amrit Mahotsav celebrations. It is planned that 75 lakh people (participants) will practice Surya Namaskar on 14-01-2022 observing covid appropriate behavior.

2. This festival comes as a thanksgiving to Mother Nature for spreading health, wealth and happiness around. It is important to mention here that Surya Namaskar is a set of asanas in combination of 12 steps. These steps comprise 8 asanas in which 4 asanas are repeated. All the 12 steps are to be done in a chronological manner in order to complete the process of one round of Surya Namaskar.

3. In order to reach out to 75 lakh people, this Ministry along with the leading Yoga Institutes/ organizations of the country have come together to make it a people centric successful programme with a tagline "SuryaNamaskarForVitality" and सूर्यनमस्कार जीवनी शक्ति का आधार. All the participants may be requested to register on any of the portals namely, <https://yoga.ayush.gov.in/suryanamaskar>, <https://yogacertificationboard.nic.in/suryanamaskar/> or <https://www.75suryanamaskar.com> before practicing Surya Namaskar on 14th Jan 2022. A wide range of digital resources are already available in public domain to learn and teach Surya Namaskar. Same may be seen on the websites/ Social Media of MDNIY, MoAyush and various major yoga organizations and Institutions.

4. This Ministry considers NCC/NSS/NYKS as key stake-holders for such a programme, as they play crucial role in observation of International Day of Yoga (IDY) every year. Your reach among the people can be best utilized for this programme. Therefore, your active support is very much required for smooth organization of this programme.

5. Dr. I V Basavaraddi, Director, MDNIY, is nominated to coordinate with you to facilitate the participation from your esteemed organization.

Contd....

6. You are therefore, requested to issue necessary directions/instructions to all the concerned in order to mobilize your units/youths/volunteers along with the resources in order to achieve the ambitious target.

Regards

Yours sincerely,

					<p>The Internet of things (IoT) describes physical objects that are embedded with sensors, processing ability, software, and other technologies that connect and exchange data with other devices and systems over the Internet or other communications networks</p> <p>It was first introduced when the earliest research into the Internet of Things was being carried out. It proposes three layers: Perception, Network, and Application.</p> <p>Perception This is the physical layer of the architecture. This is where the sensors and connected devices come into play as they gather various amounts of data as per the need of the project. These can be the edge devices, sensors, and actuators that interact with their environment.</p> <p>Network The data that's collected by all of these devices needs to be transmitted and processed. That's the network layer's job. It connects these devices to other smart objects, servers, and network devices. It also handles the transmission of all of the data.</p> <p>Application The application layer is what the user interacts with. It's what is responsible for delivering application specific services to the user. This can be a smart home implementation, for example, where users tap a button in the app to turn on a coffee maker.</p> <p>The 4 stages of IoT architecture</p> <p>1)Connected Objects An Internet of Things implementation wouldn't exist without the presence of connected or "smart" objects. These can be wireless sensors or actuators.</p> <p>2)Internet Gateway Once the sensors send in the data, it has to be aggregated and converted into digital form so that it can be processed. The second stage of the IoT architecture is what makes this happen. It essentially gets the data ready for processing.</p> <p>3)Edge IT Systems Pre-processing and enhanced analytics of the data is performed in the third stage of an IoT architecture.</p>

					<p>The internet of things, or IoT, is a system of interrelated computing devices, mechanical and digital machines, objects, animals or people that are provided with unique identifiers (UIDs) and the ability to transfer data over a network without requiring human-to-human or human-to-computer interaction</p> <p>The IoT devices will most definitely need connectivity to the controllers that will be controlling the devices. The connectivity to the network could be wired or wireless. There are several protocol options in this space like zigbee, bluetooth, z-wave, 6LowPAN, WiFi, Cellular, NFC, Sigfix etc. The network will need to evolve to support these protocols that are common in the IoT world</p> <p>Cellular networks use the same mobile networks as smartphones to allow IoT devices to communicate. Because these networks were originally designed for power-hungry devices like smartphones, they weren't always considered the best fit for IoT devices. Eventually, the cellular industry developed new technologies that were more appropriate for IoT use cases. Today, this type of wireless network is very popular, and is considered a reliable and secure method of IoT connectivity. Cell service is available in most locations in the U.S., and this type of network covers a very large area. H</p>

29/11/2021 22:33:53	Rutuja Raju Shirke	14446	11/03/2002	rutujarshirke@gmail.com	An IoT ecosystem consists of web-enabled smart devices that use embedded systems, such as processors, sensors and communication hardware, to collect, send and act on data they acquire from their environments. IoT devices share the sensor data they collect by connecting to an IoT gateway or other edge device where data is either sent to the cloud to be analyzed or analyzed locally. Sometimes, these devices communicate with other related devices and act on the information they get from one another. The devices do most of the work without human intervention, although people can interact with the devices -- for instance, to set them up, give them instructions or access the data.

					<p>Internet of Things applications have diverse connectivity requirements in terms of range, data throughput, energy efficiency and device cost. WiFi is often an obvious choice because in-building WiFi coverage is almost ubiquitous, but it is not always the appropriate choice. This article examines the role WiFi can play and two emerging IEEE standards, 802.11ah and 802.11ax.</p> <p>Data transfer requirements for IoT vary from small, intermittent payloads like utility meters to large amounts of continuous data such as real-time video surveillance. Range requirements can span from very short distances for wearables to several kilometers for weather and agriculture applications. One thing that is common is power constraint. IoT devices require constant connectivity, but they may not always have continuous access to a power source. IoT devices are expected to be power thrifty, sometimes to the extent of running on button cells for years at a stretch.</p> <p>The following diagrams show the relation of throughput and power conservation requirements as compared to the range requirements.</p>

Crucial to the field is the network used to communicate between devices of an IoT installation, a role that several wireless or wired technologies may fulfill: The objects themselves do not converse, but they may now be referred to by other agents, such as powerful centralised servers acting for their human owners.[164] Integration with the Internet implies that devices will use an IP address as a distinct identifier.

01/12/2021 11:02:01	Aditya Dhotrikar	14414	01/12/2021	adityadhotrikar.aad@gmail.com	As the Internet of Things (IoT) gathers pace, there will be far greater demand for machine-to-machine (M2M) connections, many of them wireless. These will have even greater varieties of performance requirements, reflecting the vast number of different Applications that may emerge under the umbrella of IoT. WiFi has the advantage of addressing a very wide variety of profiles because of the proliferation of its family of standards. This means it will play a role in most IoT environments, alone or interworking with more specialized protocols, or with cellular. Some IoT applications, such as vehicular services, or video-based apps like connected security cameras, will need the bandwidth of the wireless broadband network, implemented to enable other requirements like low latency (In critical environments this may take place in a private network or slice).

They don't interfere with one another because each pair of devices uses a different one of the 79 available channels. If two devices want to talk, they pick a channel randomly and, if that's already taken, randomly switch to one of the others (a technique known as spread-spectrum frequency hopping).</p> <p>To minimize the risks of interference from other electrical appliances (and also to improve security), pairs of devices constantly shift the frequency they're using—thousands of times a second.</p>

02/12/2021 15:06:42	Tejas Jangda	14407	02/12/2021	TejasJangda1@gmail.com	Bluetooth is a short range wireless communication technology for exchanging data using short-wavelength UHF radio waves (2.4 to 2.485 GHz) and build personal area networks (PANs). However, to realize IoT's potential, standardized communication protocols are needed. Recent developments in Bluetooth are set to position the technology as 'the communication protocol of choice' for IoT. According to Bluetooth Specialist Interest Group, by 2020, more than one-third of all installed IoT devices will be Bluetooth-enabled. In fact, Bluetooth with its ability to connect disparate devices and industries through short-range technology can transform the way devices interact with each other.

02/12/2021 22:07:03	Rutuja Shirke	14446	02/12/2021	rutujarshirke@gmail.com	For instance, Bluetooth 5 has four times the range, double the speed, and 800% more data broadcasting frequency, as compared to its earlier versions. These enhanced features, will increase the number of applications for which Bluetooth will be a smart choice as companies with large and critical infrastructure can have 100% uptime and cost effective solutions by deploying Bluetooth 5 enabled IoT devices. In addition, Bluetooth Low Energy (BLE), a version of Bluetooth designed for low-powered devices can help IoT devices conserve energy by maintaining the devices in sleep mode-until they are connected.

02/12/2021 22:13:27	Rutuja Shirke	14446	01/12/2021	rutujarshirke@gmail.com	Wifi has the advantage of addressing a huge variety of profiles because of the proliferation of its family of standards. This means it will play a role in most IoT environments, alone or interworking with more specialized protocols, or with cellular. Some IoT applications, such as vehicular services, or video-based apps like connected security cameras, will need the bandwidth of the wireless broadband network, implements like low latency (In critical environments this may take place in a private network or slice.)
02/12/2021 22:20:28	Rutuja Shirke	14446	25/11/2021	rutujarshirke@gmail.com	Internet of Things (IoT) is a network of physical objects or people called "things" that are embedded with software, electronics, network, and sensors that allows these objects to collect and exchange data. The goal of IoT is to extend to internet connectivity from standard devices like computer, mobile, tablet to relatively dumb devices like a toaster.

03/12/2021 10:07:07	Tejas Jangda	14407	03/12/2021	tejasjangda1@gmail.com	<p>The Internet of Things (IoT) is a network of interconnected, embedded devices that can capture and transmit data without the need for human interaction over a wireless network. IoT applications in everyday life include smart wearables, smart health monitoring, traffic monitoring, IoT in agriculture with many sensors, smart devices, robots in hospitals, smart grid and water supply, and so on.</p> <p>Advantages:</p> <ol style="list-style-type: none"> 1)It can assist in the smarter control of homes and cities via mobile phones. It enhances security and offers personal protection. 2)By automating activities, it saves us a lot of time. 3)Information is easily accessible, even if we are far away from our actual location, and it is updated frequently in real time. 4)Electric Devices are directly connected and communicate with a controller computer, such as a cell phone, resulting in efficient electricity use. As a result, there will be no unnecessary use of electricity equipment. <p>Disadvantages:</p> <ol style="list-style-type: none"> 1)Hackers may gain access to the system and steal personal information. Since we add so many devices to the internet, there is a risk that our information as it can be misused. 2)They rely heavily on the internet and are unable to function effectively without it. With complexity of systems, there are many ways for them to fail. 3)We lose control of our lives—our lives will be fully controlled and reliant on technology. 4)Overuse of the Internet and technology makes people unintelligent because they rely on smart devices instead of doing physical work, causing them to become lazy.

06/12/2021 10:30:43	Sayali khade	14466	06/12/2021	sayalikhade2001@gmail.com	Publish/subscribe messaging, or pub/sub messaging, is a form of asynchronous service-to-service communication used in serverless and microservices architectures. In a pub/sub model, any message published to a topic is immediately received by all of the subscribers to the topic. A message filter inspects the message and forwards, quashes or changes the group as required. MQTT is a lightweight, publish-subscribe network protocol that transports messages between devices.

It also suggests industrial and automotive equipment represent the largest opportunity of connected "things,", but it also sees strong adoption of smart home and wearable devices in the near term. Another tech analyst, Gartner, predicts that the enterprise and automotive sectors will account for 5.8 billion devices this year, up almost a quarter on 2019. Utilities will be the highest user of IoT, thanks to the continuing rollout of smart meters. Security devices, in the form of intruder detection and web cameras will be the second biggest use of IoT devices. Building automation – like connected lighting – will be the fastest growing sector, followed by automotive (connected cars) and healthcare (monitoring of chronic conditions).

Using real-time IoT dashboards and alerts, you gain visibility into key performance indicators, statistics for mean time between failures, and other information. Machine learning-based algorithms can identify equipment anomalies and send alerts to users and even trigger automated fixes or proactive counter measures.

The board doesn't do very much on its own, so we need to connect it to the right hardware and write the code to tell it what we want it to do. Galileo is an Arduino compatible board but the thing that makes it different is its specs, it is a cross-pollination between an Arduino Uno and a low-end computer.

14/12/2021 21:11:11	Rutuja Raju Shirke	14446	13/12/2021	rutujarshirke@gmail.com	I Learnt following points from this session 1. The physical layer is the most detailed level of abstraction in IoT. 2. It mainly consists of sensors that acquire information for the system and actuators that do actions in response to instructions from the system. 3. To imagine how they both, actuators and sensors, act together in a system, a smart house is considered for example. 4. The actuators here are used to lock and unlock doors, switch on/off the lights and alert users of any warnings or control the temperature of a room or the whole house. 5. The sensors are used to send feedback to the controller of each small system of those systems. Thank You!

आपण "भारतीय स्वातंत्र्य चळवळीतील लेखणीचे योगदान" या विषयावर आभारी पद्धतीने प्रेरक व्याख्यान दिले. विद्यार्थ्यांना अधिक तपशीलपूर्ण माहिती मिळाली. तसेच आपण आपल्या शुभहस्ते 'निनाद' या भित्तीपत्रकाने प्रकाशन केलेत आणि आमच्या विद्यार्थ्यांना प्रोत्साहन दिलेले. या बदल आपले आभार!
